CHALLENGE

1180 Peachtree in Atlanta struggled with poor mobile connectivity, slow data speeds, and dropped calls in the building and parking levels, affecting tenant productivity and satisfaction.

SOLUTION

HALO Networks installed a state-of-the-art 5G Distributed Antenna System (DAS) consisting of 300 antennas across 1.4 million square feet, 1,200 linear feet of fiber and approximately 20,000 linear feet of coax cable infrastructure.

RESULTS

The 5G DAS system delivered faster, more reliable mobile connections, boosting tenant satisfaction and positioning the building as a modern, tech-forward office space.

"Partnering with HALO Networks to install a 5G DAS at 1180 Peachtree has greatly improved tenant connectivity and business operations. The seamless installation provided reliable, high-speed mobile service with minimal disruption, boosting productivity and tenant satisfaction. We are thrilled with the results and proud to have HALO Networks as our wireless solutions partner."
