

## ARENAS

# BLUE ARENA

 LOVELAND, COLORADO

## CHALLENGE

Blue Arena struggled with poor connectivity, slow data speeds, and network congestion during large events, leading to a subpar fan experience.

## SOLUTION

HALO Networks installed a state-of-the-art 5G Distributed Antenna System (DAS) consisting of 161 antennas throughout the arena, 24,000 linear feet of fiber and approximately 9,000 linear feet of coax cable infrastructure.

## RESULTS

After the installation of the 5G DAS, the fan experience improved dramatically, and sports teams, entertainers and staff have expressed high levels of appreciation for the reliable network performance.

“We couldn’t be more pleased with our decision to partner with HALO Networks for the installation of our 5G DAS at Blue Arena. From start to finish, the team has been great to work with and diligent with meeting our needs.

The fan experience has never been better, and our sports teams, entertainers, and staff are all extremely satisfied with the seamless connectivity.”
