JW MARRIOTT TAMPA WATER STREET

 TAMPA, FL

CHALLENGE

JW Marriott Tampa Water Street began construction in 2017. In anticipation for massive usage of the hotel and convention space for the upcoming Super Bowl in 2021, Marriott Corporate and Ownership stressed the need for 5G wireless coverage to support the volume of guests, large corporate groups, conventions, and sporting events taking place in the Tampa area.

SOLUTION

HALO Networks installed a high capacity 5G Distributed Antenna System (DAS) consisting of 271 antennas across 660,000 square feet, 21 5G nodes, 2.5 miles worth of fiber within the building and throughout the district, and 15,000 linear feet of coax cabling infrastructure.

RESULTS

The benefits of installing a 5G DAS at the JW Marriott Tampa Water Street were increased guest satisfaction, enhanced event bookings, synergy with nearby Amalie Arena, and revenue growth through extended stays.

“

“Choosing HALO Networks for the 5G DAS installation at JW Marriott Tampa Water Street ensured seamless, high-speed mobile service for our guests from day one. The professional installation, completed well before our opening, allowed us to focus on other launch priorities while providing reliable connectivity throughout the property. This enhanced mobile coverage has significantly improved guest satisfaction and overall experience.”
